Course Facilitator

P.S.Madhavi
Assistant Professor

Department of Computer Science and Engineering
Vardhaman College of Engineering, Hyderabad
Academic Year 2026-27

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

This is to certify that the Course End Project titled “**College Course Registration**” is carried out by **M. Pradyumn and K. Vaishali** with Roll Numbers **25881A05A6 and 25881A05C6** towards **A9511- Python Programming Laboratory** course in partial fulfilment of the requirements for the award of degree of **Bachelor of Technology in Computer Science and Engineering** during the Academic year 2026-27.

Signature of the Course Faculty
P.S.Madhavi
Assistant Professor, CSE

Signature of the HOD
Dr. Y.Vijayalata
Professor, Head of the Department
& Dean (Student Mentoring)
Department Computer Science and
Engineering,
Vardhaman College of Engineering,
Hyderabad

6.3	Sustainable Development Goals (SDGs) Mapping.....	18
7	Conclusion.....	19
	Bibliography.....	19

Abstract

The Text Analysis System is a menu-driven console application written in Python that examines English text and reports its basic statistics together with its overall sentiment. The user can either type a piece of text directly or supply the name of a plain text file. The program converts the text to lower case, extracts the words with a regular expression, and compares every word with two built-in lexicons: a set of positive words (about 290 entries) and a set of negative words (about 140 entries). It also counts the total words, characters and sentences.

After the analysis, the system prints a formatted report containing the total words, character count, sentence count, the list and count of positive words, the list and count of negative words, and the overall sentiment. The sentiment is Positive when positive words outnumber negative words, Negative when negative words outnumber positive words, and Neutral when both counts are equal. Error handling covers an empty input, a missing file, unreadable files and invalid menu choices. The tool uses only the Python standard library (the re module), so it runs on any computer with Python and demonstrates, in a small and easily understandable program, how lexicon-based text analysis works.

Keywords: Text Analysis, Sentiment Analysis, Lexicon-based Approach, Python, Regular Expressions, Word Count, Console Application.
